

The Solution to Extra Yields Is Here!

The dependable and trusted

Air Reel CRARY

Add bushels to the hopper!

Whatever combine you work with — whatever standing small grain or bean crop you're harvesting — the addition of a Crary Air Reel will add bushels to the hopper...whatever the conditions.

A constant stream of high velocity air gently feeds back to the auger, eliminating crop bunching.

- **Air Moves the Crop** — powerful air moves the crop back for even feeding, especially important to utilize the capacity of today's larger capacity combines.
- **Less Shatter Losses** — The air system saves valuable crop that shatters and is otherwise lost at the front of the cutterbar.
- **Visibility** — Large reel diameter and bat thickness are combined to provide superior visibility to the cutterbar and ahead of the combine.
- **Proven Performance** — Since 1988 Crary Air Reels have helped farmers obtain extra yields year after year.

Air In, Profits Up!

The Crary Air Reel delivers the extra yields.

It's time you benefited from the Crary Air Reel

The ever-popular Crary Air Reel is Patented, field-proven and farmer tested.

- Increased Yields
- Faster Ground Speeds
- Additional Harvest Control

A specialized air manifold firmly pushes the crop off the cutterbar, over the platform and into the auger.

By eliminating the uneven feed characteristics associated with most reels, the Air Reel helps you get top performance from your combine.

The Crary Air Reel is more gentle on fragile crops, reducing shatter and boosting your profitability.

A Variety of Crops

Types of crop and condition of crop are not a concern with the Crary Air Reel.

- Move between fields without stopping to make adjustments
- Downed crop, thick crop, hailed crop or thin crop, this reel will help you get the highest yields from your fields.

The fan is driven by either a gear box or belt drive system featuring a heavy duty PTO drive shaft with slip clutch.

Don't take our word for it...take theirs!

“ Every bean that was cut by the cutter-bar went into the combine – not the ground. I'd never go back to the regular reel.

Peter Litton, St. Smith, AR

I'm very impressed with this reel...it's the greatest innovation in harvesting standing crops since the self-propelled combine!

Scott Roggenbuck, Harbor Beach, MI

It's a real must in short beans!
Lowell Weitzenkamp, Hooper, NE

”

Faster Ground Speeds

Higher ground speeds are now yours with the Crary Air Reel! No more waiting in the field for bunched-up crop to clear the platform. A constant flow of air pushes crop into the auger for better feeding.

“Superior above conventional methods! Crop feeds into the header with ease and flows easily into the combine. Air Reel kept the crop off of the sickle and evenly distributed. It allowed my combine to run with optimum efficiency.”

Ray Johnson, Moorhead, MN
